## Families Making the Connection

### Kale is Cool!

Kale is a green leafy vegetable, part of the cabbage or Brassicaceae family. Kale is grown all over the world. In the United States, California, Georgia, New Jersey, Texas, and North Carolina are the top kale producing states.

Kale is considered a cool-season crop but can be grown and harvested almost year-round. It prefers cooler weather and loamy soil. Kale can survive and may taste sweeter when harvested after a frost.

Kale is considered a superfood—a nutritional powerhouse of vitamins and antioxidants. One cup of raw (loosely packed) kale has about 8 calories and ½ cup of cooked, chopped kale has about 18 calories. Raw and cooked kale are excellent

sources of vitamins A, C and K, cholesterol free and low in fat and sodium.

Fresh, raw kale can be purchased in bunches or washed, chopped and bagged. Kale can also be sold canned, frozen, dried and as juice. Fresh kale is a great addition to a salad, sandwich, wrap or smoothie. Kale can also be boiled, steamed, baked, braised, or sautéed. Avoid using an aluminum pan to cook greens. Try not to overcook. Wash kale thoroughly under clean, running water before cooking or eating.

Kale along with collards, mustard greens, romaine lettuce, spinach, Swiss chard, and turnip greens are dark, leafy greens. Try kale and other dark, leafy greens today! Learn more about kale and other vegetables at <https://bit.ly/3c30kws>.
